Introduction

The Grindline Express catalog contains a wide variety of Scotch-Brite surface conditioning products as well as a large assortment of coated abrasive products designed to meet the needs of both production applications and day to day MRO situations. Choose from hand pads, rolls, discs, wheels, belts and various bench area products. And, of course, we offer a complete line of accessories to optimize product performance. 3M abrasive products are used on most materials including ferrous and non-ferrous metals, specialized alloys, wood, plastics, composites, ceramics, glass, leather and rubber. Types of operations include grinding, deburring, cleaning, finishing, polishing and blending.

How to use this catalog

This catalog is designed to be as "user friendly" as possible. We have divided the catalog into sections: Hand Pads, Sheets, Discs, Rolls, etc. You will see that each section begins with a page that includes application photos and suggested uses. Each section includes several tables containing the various products. Simply find the size and grade for you, make a note of the UPC number and order the product from your 3M Abrasive Systems Division Distributor.

Splices (where applicable) are shown at the bottom of the page.

Kut Stock items are identified with red UPC numbers.

Thanks for choosing 3M coated abrasive, surface conditioning and superabrasive products.

Coated Abrasives

7-5-4

Backed by over 90 years of industrial experience, 3M Research has been a proven leader in developing new coated abrasive products and systems for modern production operations.

In designing the versatile line of products, 3M draws from a proven formula that's your assurance of dependable performance.

The formula is: 7 Minerals ... 5 Backings ... 4 Bonds.

7 Minerals

Minerals perform the basic job of cutting, 3M offers seven kinds of natural and synthetic minerals to provide a rapid cut and long working life.

Natural Minerals: emery, garnet.

Synthetic Minerals: ceramic aluminum oxide, aluminum oxide, alumina zirconia, silicon carbide, industrial diamonds.

5 Backings

They're the platforms that carry and support the mineral grains.

The five categories include paper, cloth, fibre, paper and cloth combination and polyester film.

4 Bonds

3M Coated Abrasives have two layers of adhesives: a "make" coat to anchor the mineral, and a "size" coat to lock the mineral to the backing.

3M offers four types of bonds; glue, resin over glue, resin over resin and waterproof.

Remember the formula: 7 Minerals ... 5 Backings ... 4 Bonds. It multiplies into an almost infinite combination of practical, durable tools. Your 3M representative will help you find the right combination to do the best job for you.

Coated Abrasives should be selected carefully, matching the coated abrasive qualities to the materials and tools used and the desired results. The answers to the questions below will help determine the best coated abrasive to use for a specific application:

Kind of substrate material—What is the composition of the surface to be finished? What type of mineral is required to cut the substrate? Does it have to be sanded wet or dry? Will it tend to load the abrasive? The basic material is an important factor in selecting the proper coated abrasive product.

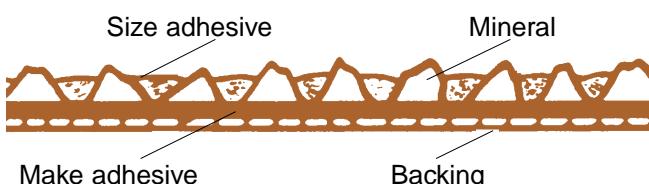

Shape and condition—Is the surface flat or contoured? Will the surface require a great deal of stock removal to level a surface or to remove coats of paint or varnish, or does the surface just have to be finished in preparation for coating?

Equipment—The equipment at hand will influence the form of coated abrasive. Some equipment requires pre-fabricated belts while others require cut sheets or discs.

Finish—What type of final finish is needed? A rough finish or a smooth finish? The finish determines the grade or grade sequence to use.

3M manufactures coated abrasives in many shapes and sizes such as the standard sheets, rolls, discs, and belts. Also available are many specialized abrasive constructions such as PG wheels, evenrun bands, cartridge rolls, fiber discs, adhesive backed abrasives, and others.

Coated abrasive grades—Grade sizes are the size of the mineral grain. There are 22 common grades. They range from the coarsest, grade 12, to an extremely fine powder like mineral form, grade 600. For many newer applications, minerals are also produced in more accurate gradations which are designated by the average particle diameter in microns. There are 12 micron grades. An open coat abrasive has mineral grains that cover about 40% to 70% of the backing. An open coat abrasive is used where the material surface being abraded tends to clog or load the coated abrasive surface. A closed coat abrasive has mineral grains covering 100% of the abrasive backing. This construction is used where loading is less of a problem.

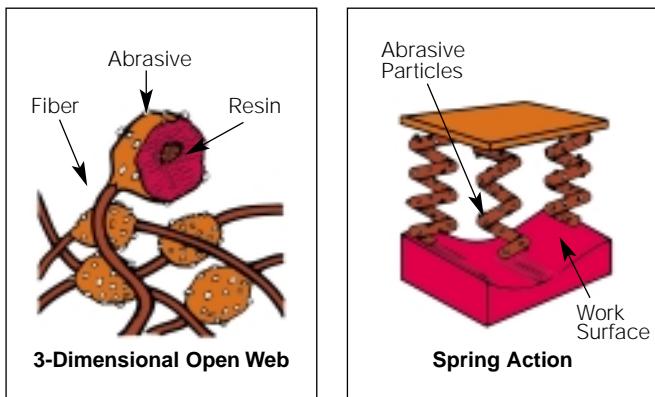

Surface Conditioning Products

Mineral, Resin and Fiber: Building Blocks for Scotch-Brite™ Surface Conditioning Products

Synthetic fibers and abrasive particles are combined and bonded to form a conformable, three-dimensional, open web material. The exceptional performance characteristics of this open web technology have been demonstrated time after time in countless factories and shops.

- Controlled abrasive action helps prevent undercutting or gouging so there is less chance of disturbing critical tolerances.
- Fresh abrasive is continually exposed to the work surface to deliver consistent, uniform results and to provide long product life.
- Uniform, close-tolerance construction results in smooth running wheels, reducing operator fatigue.
- The open web allows air to circulate for cool operation so there's less risk of warping or discoloring the part.
- The open web resists loading to provide consistent surface preparation and finishing action and long product life.

- Conformable action of the web allows the wheels to follow contours and edges, and to maintain uniform contact with the surface.
- Synthetic fibers eliminate the danger of loose flying wires commonly associated with wire brushes.

Surface finishes generated by Surface Conditioning

Mineral Type	Grade	Finishes Generated (Micro-Inch Range)		Coated Abrasive Grade Equivalent
		Aluminum	Stainless Steel	
A	Coarse	130-150	62-72	80-150
A	Medium	80-100	32-40	150-180
A	Very Fine	16-35	6-12	220-320
S	Super Fine	8-12	4-6	320-600

Safety

Read and follow instructions for use. Always use appropriate protective glasses, face shields and body protection. Do not exceed maximum operating RPM. Use guards provided with machine. Follow safety operation procedures posted in work areas.

Factors Affecting Performance of Surface Conditioning Products

Product Surface Speed

Because product speed has a significant effect on performance (cut, life, and finish), it is important to select the proper speed for a particular operation and work piece.

Generally, low speeds are desired for generating very uniform satin finishes, for finishing aluminum alloys without lubricants and for use on composite or other soft material applications. High speeds are recommended when it is desired to remove or blend surface imperfections. This high speed will result in faster cut along with finer finishes.

Recommended Operating Speeds

Decorative Finishing	500 - 3000 SFPM
Composites / Soft Materials	1200 - 2700 SFPM
Cleaning and Conditioning	2000 - 5000 SFPM
Prepolishing.....	2000 - 7000 SFPM
Oxide Removal	4500 - 6500 SFPM
Deburring	5000 - 6500 SFPM
Blending / Polishing.....	6000 - 8000 SFPM
Cutdown Prior to Buffing.....	7000 - 8500 SFPM

Work Pressure

It is important that adequate pressure be used to generate the desired cut, finish, and life. Excess pressure, however, can result in decreased product life. Scotch-Brite wheels operate under work pressures of 10 to 40 pounds per inch of width. In the case of harder (6 - 9 density) products, high pressures are usually necessary to gain the full benefit of the wheel.

Feed Speed (Dwell Time)

Feed speed is directly related to product life, finish and cut. Lower feed speed means longer dwell time and, thus, more work can be done on the workpiece. When an operation is set up an attempt should be made to use the fastest feed speed possible to obtain the desired results. This will give the best economic result from the standpoint of product life.

In general, if product speed remains constant, fast feed speeds increase scratch length and, conversely, slow feed speeds shorten scratch length. This technique can be used to generate a particular decorative finish.

Oscillation

In many cases, such as decorative finishing and cleaning, it is desirable to incorporate an oscillatory motion for the purpose of increasing cut, breaking up directional scratch, and producing a uniform finish. A good starting point is 150 CPM (cycles per minute) at a stroke of $\frac{3}{8}$ inches. This may be varied depending on the particular result desired.

In off-hand operations, moving the part from side to side will provide an oscillating action and more uniform finish.

Lubricant – Coolant

Coolants, like water and some water soluble oils, reduce heat resulting in longer product life and greater cut. In the case of most oils or tallow lubricants, surface roughness can be reduced. The higher viscosity lubricants produce lower surface roughness, i.e., grease produces a finer surface finish than oil. In automatic or semi-automatic operations, it is desirable to use lubricants or coolants whenever possible.

Product Hardness (Density)

3M wheels are available in a number of densities or hardnesses. Generally, the softer products, 2, 3, 4, and 5 density, are used for decorative finishing. They will conform more readily to surface contours along with generating a more uniform finish. The harder products, 6, 7, 8 and 9 density, are to be used for the more difficult blending, cleaning and deburring operations.

Surface Speed Conversion Chart

Scotch-Brite™ Hand Pads and Rolls

When surfaces need to be cleaned, scuffed, deburred or finished by hand, Scotch-Brite hand pads and rolls outperform steel wool, wire brushes and other non-woven hand pads. They cut fast and leave a more consistent finish than these other abrasives. Scotch-Brite material will never rust and can be used with water or solvents. Truly your best choice for cleaning and finishing surfaces by hand. The world's leading surface conditioning products.

Hand Pads

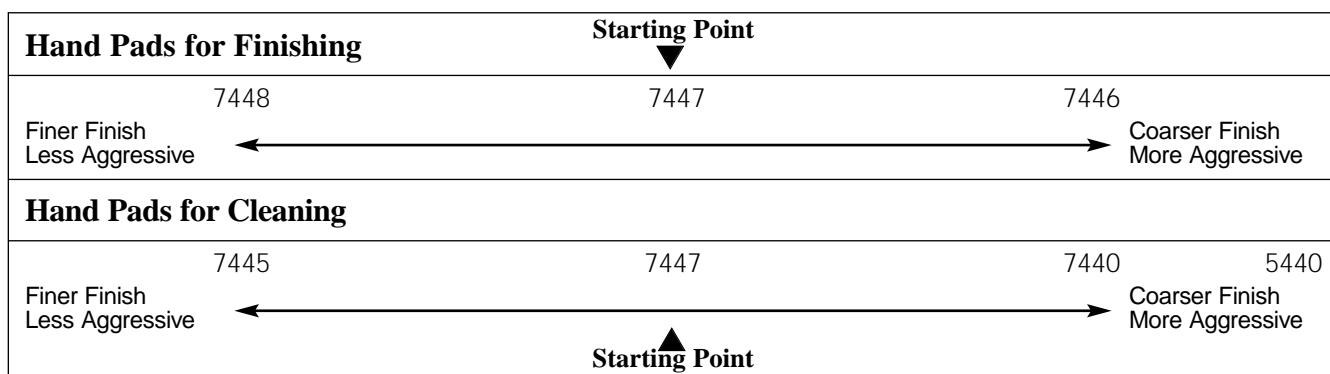

A select group of Scotch-Brite webs cut into 6" x 9" (the #5440 are 4" x 6") sheets available in a variety of grades ranging from light duty cleansing to heavy duty.

14

15

Clean and Finish Rolls

Can be used for hand cleaning, blending, finishing. Can be cut to desired length for oscillating sanders.

Color: Type A - Maroon
Type S - Gray
Type F - White

Cut and Polish Rolls

Scotch-Brite Cut and Polish Rolls outlast and outperform ordinary emery cloth and utility rolls around angles, odd shapes, inside and outside diameters.

Applications: Stropping pipe ends for sweat soldering or welding, general cleaning and deburring odd shaped materials.

Color: Tan

Coated Abrasive Sheets and Rolls

3M™ 341T 3M Blue Grit Utility Cloth X Wt.

3M™ 311T 3M Blue Grit Utility Cloth J Wt.

Tough aluminum oxide mineral bonded to cloth with 3M's heat resistant Resinite™ system. This special bonding technique allows for a more uniform coating. Your advantage is a consistent scratch pattern.

Get the "TRUE BLUE" advantage in all operations: Contour sanding, strapping, deburring, rust removal, cut-down prior to polishing, all general maintenance work.

3M™ 241K Three-M-ite™ Elek-Tro-Cut™ X Wt.

3M™ 211K Three-M-ite™ Elek-Tro-Cut™ Cloth J Wt.

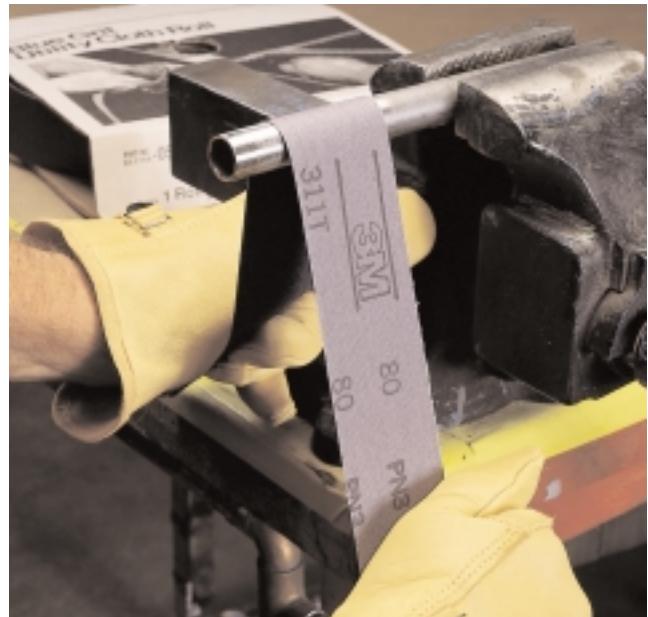

These products have many uses in both production and maintenance jobs. They have a flexible cloth backing and are coated with aluminum oxide mineral.

3M™ 001K Crystal Bay™ Crocus Cloth

For very fine metal finishing.

3M™ 011K Crystal Bay™ Emery Cloth

Glue bond, closed coat, for non-technical use by hand in sheet form.

Garnet Abrasive Sheets

3M™ 110N, 130N, 140N A, C, D Wt.

Grades 50–280

Garnet sandpaper is the traditional choice of cabinet makers and wood workers for producing smooth, fine finishes on bare

28

* Add Prefix 051144- to UPC No. when ordering.

Production™ Abrasive Sheets

3M™ 326U, 336U, 346U A, C, D Wt.

Grades 36–220

3M Production sandpaper is an almost universal abrasive. These long lasting sheets are made with aluminum oxide, a synthetically produced mineral known for its sharpness and durability. It is ideal for hand or machine sanding of many different materials, including woods, metals, paints, plastics, and fiberglass.

29

9" x 11" Tri-M-Ite™ Fre-Cut™ Abrasive Sheets

These sandpaper sheets are ideal for dry sanding between coats of varnish, paint, and other finishes. The abrasive surface has been treated with white stearate, a coating that resists clogging and extends abrasive life. The abrasive is silicon carbide, a sharp and extremely hard synthetic mineral that cuts fast and satin smooth.

3M™ 415U Tri-M-ite Fre-Cut Paper

Open Coat A Wt.

A specially treated open coat silicon carbide paper for use whenever filling or loading of the abrasive is a problem. The lightweight paper stock is intended for use with hand pad and disc sanders. These sheets offer a better finish with fewer paper changes for finishing and blending operations, white wood sanding, plastics, and fiberglass.

3M™ 435N Tri-M-ite Fre-Cut Paper

Open Coat C Wt.

This is a heavier, more durable sandpaper and is intended to minimize filling or loading in general purpose sanding.

30

3M™ 405N Tri-M-ite Fre-Cut Paper

Open Coat A Wt. Type F (Flexible)

3M™ 414N Tri-M-ite Fre-Cut Paper

Open Coat A Wt. T2

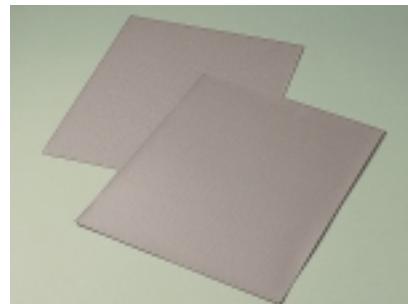

Flexible A weight paper ideal for hand sanding operations that involve contoured shapes. Designed to provide conformability that exceeds that of conventional abrasive sheets.

9" x 11" Wetordry™ Abrasive Sheets

3M Wetordry™ sheets use a silicon carbide abrasive for efficient cutting and high wear resistance. They feature a waterproof resin-over-resin bond that resists heat and holds the abrasive particles more firmly than conventional glue or resin-over-glue bonds. Because the sheets are resistant to oil and water, they can be used with a lubricant to reduce clogging, extend abrasive life, and improve finish.

Fibre Discs

3M™ 785C Regalite™ Polycut Fibre

3M 785C Discs were developed specifically for stainless steel grinding and blending. This special blend of Cubitron™ Mineral and aluminum oxide minerals with a grinding aid was precisely designed for stainless steel but is also suitable for some combinations of stainless steel and carbon steel.

3M 785C is a proven performer for stainless steel fabrication, food service and restaurant equipment, dairy equipment and food products machinery.

3M™ 280C – 3M Type D Open Coat

These are full resin bond aluminum oxide fibre discs and are designed for use on portable tools with proper backup pads. Type C is closed coat and Type D is open. Type XY also incorporates a grinding aid. Type C is preferred in most industrial and automotive applications while Type D is used where loading occurs such as on solder, paint, plastic, etc.

3M™ TN Quick Change Fibre Discs

TN "Quick Change" is a system in which each disc has its own mounting nut hardware (5/8" - 11) thread and can be mounted directly on the tool with the proper accessory back-up system. This enables the operator to change the product in a very efficient manner, and there is no need for a retainer nut or spanner wrench. *This system is compatible with 3M Disc Pad Hubs and Face Plates as well as other backup systems.*

Accessories – Fibre Discs

3M™ Disc Pad Hubs and Face Plates

3M's Disc Pad Hubs and Face Plates are light weight, have excellent balance, and low profile for better grinding and finishing control. Full size plates give firm support to disc edge and are tapered to fit the disc shape to minimize flare and wild scratches. This system can result in long term savings in parts and changeover time.

3M Disc Pad Hubs have a $\frac{5}{8}$ "-11 thread metal insert and can be used on most face plates.

3M Disc Pad Face Plates are color coded by density:

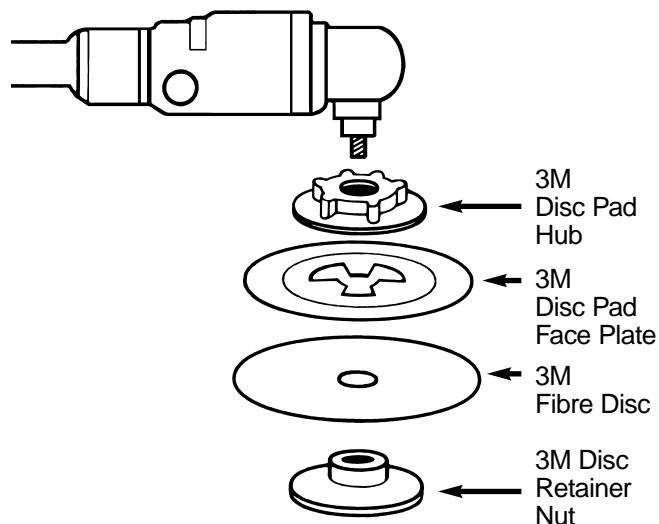

- Red – extra hard: Heavy grinding. (Ribbed only)
- Black – hard: Heavy metal removal, large welds, etc.
- Gray – medium: General purpose grinding and finishing. Normal flexibility.
- White – soft: Finishing operations, flexible, follows contours.

3M™ Disc Pad Face Plates – Ribbed

Ribbed face plate results in cooler running disc. Higher pressure on the ribbed sections prolongs disc life when dulling is a problem. Available in 5", 7" and 9" diameter. New red disc is extra hard for heavy grinding.

Diameter	Hardness	Max. Oper. RPMs	UPC No.
5"	Extra hard – red	12,000	051144-81732
5"	Hard-black	12,000	051144-81733

9"	Soft-white	6,500	051144-81731

3M™ Disc Pad Hubs and Face Plates

38

37 Backup system for fibre discs or surface conditioning discs with a $\frac{7}{8}$ " center hole.

Durable plastic hubs have $\frac{5}{8}$ "-11 threaded metal insert. Replaceable face plates are available in three color-coded densities. Hard-black is for heavy metal removal such as large welds. Medium-grey provides normal flexibility for general purpose grinding and finishing. Soft-white is used in finishing operations and contour grinding.

3M face plates are designed to resist chunking, reduce edge wear and prolong abrasive disc life.

Roloc™ Discs

Provide a fast, efficient method for deburring, blending, finishing, removing tool marks and die polishing on all types of metals. Resist loading and shelling under severe operating conditions. They lock securely in place with just a half twist... a half twist and it's off. Each disc is color coded by grade. Ideal for use on air tools (right angle and straight) and on flexible shaft grinders. Additionally, Roloc discs and pads feature three different types of fastening systems to accommodate most any stock that you may currently have on hand.

Easy to mount...easy to change

3M coated abrasive and Scotch-Brite Roloc surface conditioning discs feature a threaded male button attached to the back of each disc for quick and easy mounting to a Roloc disc pad. With a quick half-turn, the disc is locked securely in place for the life of the disc. Each button or disc is color coded to designate grade.

EXL Roloc™ Unitized Wheels

Roloc unitized wheels are strong, efficient products for edge deburring and finishing. They perform well in a variety of metal working applications and on intricate machined parts where close tolerances are important. The Roloc, Roloc TS, or Roloc+ holding systems make changing unitized wheels quick and easy.

Roloc™ Bristle Discs

3M Roloc Bristle Discs are ideal for safely cleaning and stripping a wide variety of substances off of metal. The 3M Bristle Disc will easily cut through hardened enamel paint, thick dried adhesive and layers of corrosion without destroying the underlying metal or compromising your safety. In addition, the 3M Bristle Disc does not clog-up with the substances you are trying to remove, giving you a consistent finish throughout the life of the disc. 3M Bristle Discs come in sizes from 1 inch Roloc™ to 7 inch x $\frac{5}{8}$ -11 thread. For hard to reach areas, try the 3 inch Radial 3M Bristle Disc. Most 3M Bristle Discs come in grades 50, 80 and 120.

Roloc™ Radial Bristle Discs

3M Radial Bristle Discs are abrasive-filled products with unique features designed to increase productivity in the following applications:

- Remove adhesive, paint and other coatings, discoloration, heavy oxides, and surface contaminants.
- Deburr and blend.
- Clean and prepare surfaces before and after welding.

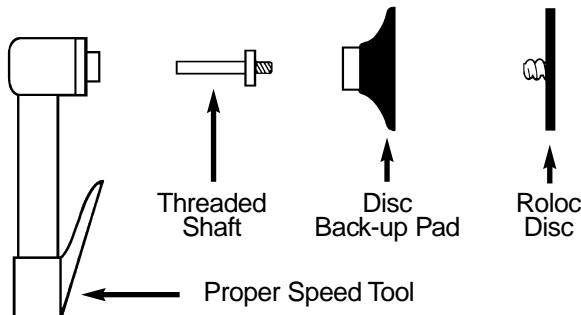

Flexible bristles conform to the part and clean without removing base material reducing damage and rework. The unique bristle pattern reaches tight or awkward areas such as grooves and along 90° angles.

3M Back-up Pad

Non 3M Back-up Pad

WARNING: Use with 3M™ Roloc™ Back-up pads for safe, secure performance. Non-3M back-up pads may have a deeper threaded cavity which causes the button to continue to tighten down during use. This can cause the button to separate from the disc resulting in disc fly off and potential operator harm.

Stikit™ Abrasive Discs

3M Stikit products have a pressure sensitive adhesive backing for press-on, peel-off convenience. This attachment system eliminates slippage between the sander back-up pad and the abrasive resulting in higher cut rates with fewer interruptions for replacement of sandpaper.

3M™ 415U Stikit™ Tri-M-ite™ Fre-Cut™ Paper A Wt. Disc Rolls

Made from A weight Tri-M-ite™ Fre-cut finishing paper, which has a special coating that resists loading. General purpose discs for wood, metal, and fiberglass sanding applications.

3M™ 214U Stikit™ White Gold Paper A Wt. Disc Rolls

A premium aluminum oxide abrasive product with a special coating that resists loading. This superior product is precisely graded for an excellent finish. For paint, primer, wood, metal, and fiberglass.

PSA Discs

PSA (pressure sensitive adhesive) Discs provide a fast, efficient method for deburring, blending and cleanup on hard-to-get-at areas. Adhesive-backed PSA Discs adhere and remove quickly and easily to speed disc change time.

Use 3M PSA discs for all kinds of work. These tough fast-cutting discs resist loading and shelling under severe operating conditions.

3M™ Three-M-ite™ Resin Bond PSA

Aluminum oxide resin bond cloth PSA (pressure sensitive adhesive) discs provide a fast, efficient method for deburring, blending and cleanup.

Surface Conditioning Discs

Surface conditioning discs and Roloc discs and wheels can be used on right angle grinders and die grinders.

Surface Conditioning Discs (Hook and Loop)

Scotch-Brite Surface Conditioning Discs are best for finishing, cleaning and light deburring on flat metal surfaces. Used on right angle (high speed and low speed), orbital, and dual action power hand tools.

Clean & Strip Discs

Handle tough cleaning and stripping jobs with an extra coarse, open web. Designed to work faster and safer than wire brushes.

Scotch-Brite Clean & Strip discs are surface conditioning web cut into circular discs to the customer's diameter and center hole specifications. Discs can be used single or multiple loaded onto a spindle and used on edge.

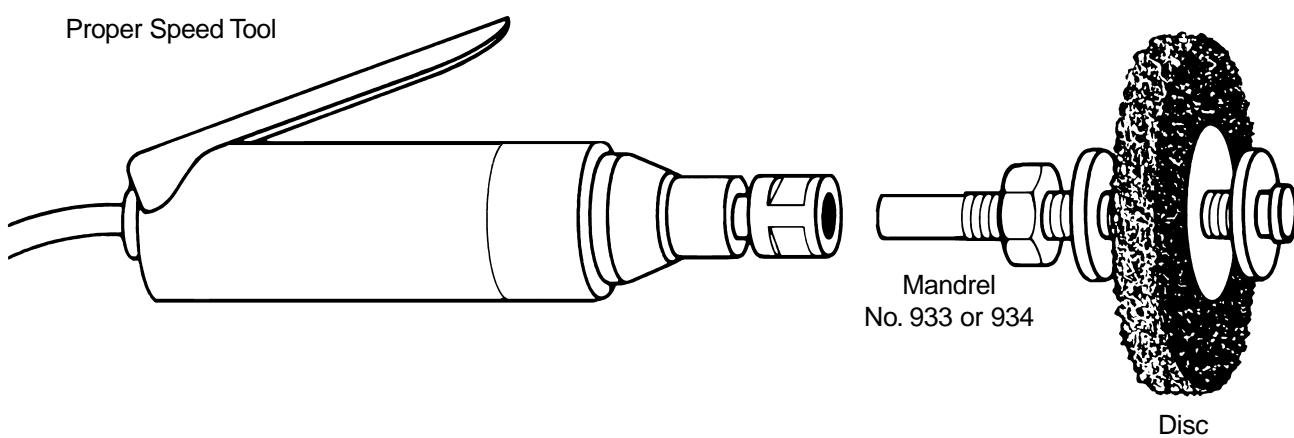

Applications: Stripping paint from metal surfaces, inspecting welds, removing coatings and preparing surfaces for recoating, cleaning concrete molds and forms, general plant maintenance.

High Strength Discs

MED:

Very conformable. For finishing using bench motors, horizontal grinders or drill motors.

Applications: Antique finishing or highlighting, satin finishing aluminum extrusions, oxide and light coating removal, stainless steel finishing.

Color: Type A – Maroon

VFN:

Designed for light deburring work. A built-in lubricant provides longer life. Very conformable and excellent for finer antique finishing.

Applications: Light gear deburring, keyway and o-ring slot edge radiusing, antique finishing builders hardware.

Color: Type A – Maroon
Type S – Brown

Belts – Bench Top

For bench top or bench area sanding and grinding, 3M offers products to make your work go fast and easy with superior results.

3M™ 777F Regalite™ Polycut™ Resin Bond Cloth YF Wt.

3M 777F Regalite Polycut Resin Bond Cloth combines superb performance with long life to bring quality and economy to a variety of operations. It grinds cool with a high cut rate to deliver the finish you're looking for.

The product is a combination of 3M Cubitron mineral and special aluminum oxide mineral coated on a firm Y wt. synthetic backing. It also incorporates a grinding aid to provide optimum performance on stainless steel and nickel alloy off-hand and medium pressure grinding applications.

74

3M™ 707E Regalite™ Polycut™ Resin Bond Cloth JE Wt.

3M 707E Regalite Polycut Resin Bond Cloth provides a smooth, cool, fast cut that you can depend on for high-quality results.

3M 707E incorporates a blend of 3M Cubitron mineral and aluminum oxide minerals and grinding aid on a very flexible J weight synthetic backing.

Ideal for a wide range of applications requiring conformability on a variety of materials, such as stainless steel and high nickel alloys.

Deburring Belts – Portable Tool

3M offers a complete line of coated abrasive belt constructions to meet all of your grinding, deburring and sanding needs.

3M™ 777F Regalite™ Polycut™ Resin Bond Cloth YF Wt.

The product is a combination of 3M Cubitron™ mineral and special aluminum oxide minerals coated on a firm Y wt. synthetic backing. It also incorporates a grinding aid to provide optimum performance on stainless steel and nickel alloy off-hand and medium pressure grinding applications.

3M™ 741E Regalite™ Resin Bond Cloth XE Wt.

3M™ 751E Regalite™ Resin Bond Cloth XE Wt.

Unique combination of Cubitron & aluminum oxide minerals on strong rayon backing.

77

3M™ 241E Three-M-ite™ Resin Bond Cloth XE Wt. Grades 50 and Finer

3M™ 251E Three-M-ite™ Resin Bond Cloth Type HO XE Wt. Grades 36 and 40

A high performance aluminum oxide mineral coated on a firm synthetic backing, providing superior aggressiveness and edge wear resistance.

3M™ 240D Three-M-ite™ Resin Bond Cloth Open Coat X Wt.

3M™ 241D Three-M-ite™ Resin Bond Cloth X Wt.

Aluminum oxide X-weight cloth.

Belts – Portable

The product selection for portable belts ranges from our standard aluminum oxide to our premium 761D product, which is a blend of 3M's proprietary Cubitron mineral and premium aluminum oxide. These belts deliver a fast cut which means a time savings for you!

3M™ 761D Y Wt.

The new 3M 761D portable belts are a revolutionary step in the advancement of coated abrasive belt sanding for portable belt applications.

3M™ 241D Three-M-ite™ RB Cloth X Wt.

3M's standard aluminum oxide X-weight cloth.

3M™ 240D/240A Three-M-ite™ RB Cloth Open Coat X Wt.

An aluminum oxide, resin bonded open coat construction on an X-weight drills cloth backing, exhibiting greater flexibility than the closed coat version.

3M™ 441D Three-M-ite™ RB Cloth X Wt.

Silicon carbide mineral coated on a cloth backing.

Scotch-Brite™ Surface Conditioning

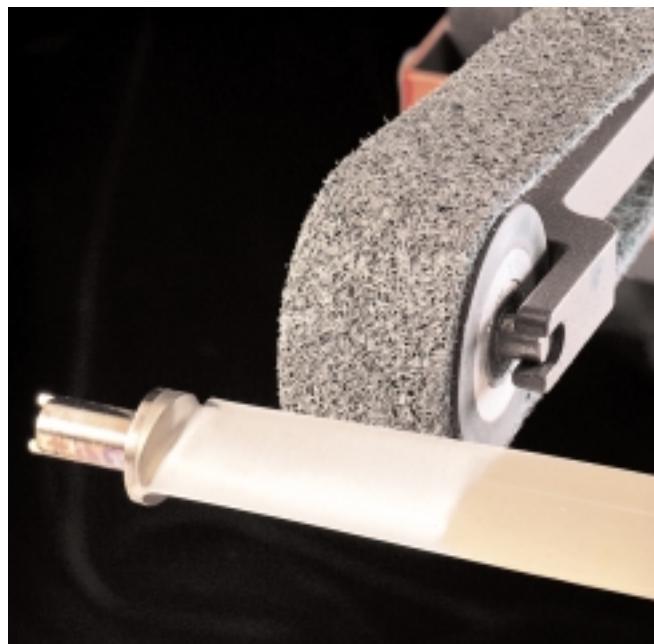

Scotch-Brite surface conditioning belts are used worldwide to finish, polish and buff metal, wood and plastic surfaces.

Recommended operating speeds:

Generally, low speeds are recommended for generating very uniform satin finishes, finishing aluminum alloys without lubricants, and woodworking applications. Higher speeds are recommended when removing imperfections prior to buffing. High belt speed will result in faster cut along with finer finishes.

Application	Recommended SFPM
Decorative Finishing	500-3,000 SFPM
Wood Sanding	1,200-2,700 SFPM
Deburring	5,000-6,500 SFPM
Cleaning and Conditioning	2,000-5,000 SFPM
Oxide Removal	4,500-6,500 SFPM

SFPM = Surface Feet Per Minute

Polishing: fewer steps

Scotch-Brite surface conditioning belts refine rough surfaces with little or no dimensional change to the workpiece—and they can finish the job in fewer steps than conventional products, while generating a uniform scratch pattern.

Grindline conditioning: fast and easy

Grindlines, milling marks or microburrs left by cutting tools or other abrasives can be quickly and easily conditioned with Scotch-Brite belts, leaving a consistent and burr-free surface. The belts will also blend scratches and blemishes so they won't show through most paint systems. Surfaces conditioned with Scotch-Brite belts are easy-to-clean and easy-to-coat, reducing production steps and costs.

Satin Finishing: quick and consistent

With Scotch-Brite belts on your automatic equipment or portable power tools, you can quickly produce consistent satin finishes on a variety of metals. And using Scotch-Brite belts in tandem with 3M coated abrasive discs and belts on stainless steel, you can match #3 and #4 finishes.

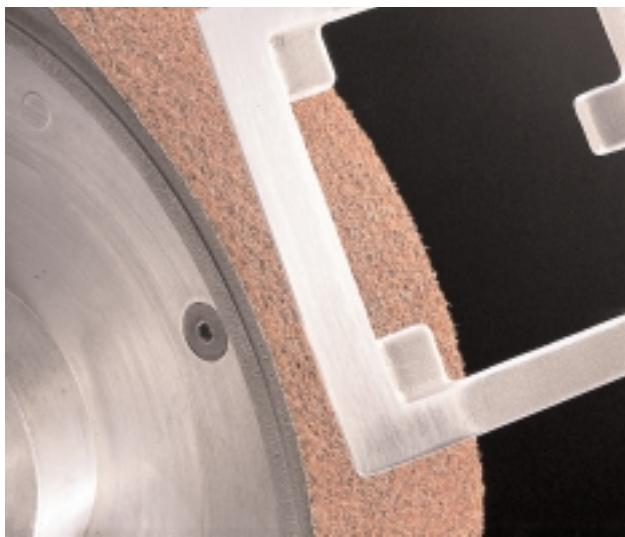

Surface Conditioning Belts

A reinforced non-woven nylon material spliced into belt form provides a more consistent, more appealing finish in decorative finishing applications. Resists loading and reduces heat build-up, increasing life and improving performance. Designed for cleaning, finishing and light deburring operations using standard abrasive belt equipment.

A VFN - Blue A CRS - BROWN
 A MED - Maroon S SFN - Gray

SE Surface Conditioning Belts

New Scotch-Brite brand "SE" surface conditioning products feature a more aggressive mineral in this non-woven nylon abrasive impregnated web construction than regular Scotch-Brite surface conditioning belts.

Scotch-Brite™ Wheels

Scotch-Brite EXL wheels are unmatched in production and maintenance operations. Use them on portable power tools, bench motors, floor lathes and automatic or semi-automatic equipment to clean, deburr, blend, finish or polish all types of metals, composites or plastics.

An Extensive Range of Applications

EXL wheels can be used on many types of metal to create a uniform, burr-free surface.

Deburring Stamped parts (ferrous, non-ferrous, special metals); aircraft components; surgical instruments; aluminum extrusions; machined metal components.

Edge Radiusing Formed wire; cutlery; aluminum extrusions; machined parts; turbine blades.

Blending & Finishing . . Contours; grindlines; brazed surfaces; airfoils of turbine blades; compressor shafts; control panels; nameplates.

Polishing Gun barrels, valve spools; machined shafts; golf club heads; other machined parts prior to plating or other subsequent operations.

Technical Information

Maximum Operating Speed: Wheels must be operated at or below specified maximum operating speeds (M.O.S.).

Replace these conventional products:

- Steel wool
- Hand files
- Carbide burrs
- Handknives and scrapers
- Sand blasting
- Wire brushes
- Tampico and bristle brushes
- Buffs and compounds
- Rubber bonded wheels
- Set-up wheels

Application	Recommended SFPM
Decorative Finishing	500-3,000 SFPM
Composite/Wood Sanding	1,200-2,700 SFPM
Cleaning and Conditioning	2,000-5,000 SFPM
Prepolishing	2,000-7,000 SFPM
Oxide Removal	4,500-6,500 SFPM
Deburring	5,000-6,500 SFPM
Blending/Polishing	6,000-8,000 SFPM
Cutdown Prior to Buffing	7,000-8,500 SFPM

SFPM = Surface Feet Per Minute

Scotch-Brite™ EXL Deburring Wheels

Available with either *silicon carbide* or *aluminum oxide* minerals, EXL wheels help manufacturers of high-tolerance parts meet increasingly stringent product quality and production efficiency requirements.

Aggressive and smooth running

EXL wheels run smoothly providing greater operator comfort, safety and control...especially beneficial when working with valuable parts.

Cool operation protects delicate parts

The open web construction of EXL wheels allows air to circulate across the work surface. This helps prevent overheating

ing that causes discoloration and warping of thin and delicate materials.

Long life saves money

Extensive customer tests show that EXL wheels last much longer than other non-woven products while maintaining consistent performance and uniform wheel wear. More production parts per wheel means money saved.

Clean and safe

Nuisance dust from expended abrasive is greatly reduced compared to other types of non-woven wheels. And, there are no flying wires to endanger operators as with wire wheels.

New EX2 and EX3 Deburring and Finishing Wheels can provide additional value in many applications. Ask your 3M sales representative or distributor for additional information.

Scotch-Brite™ EXL Unitized Deburring Wheels

Applications:

- Scotch-Brite EXL unitized wheels are excellent for deburring and polishing titanium, special alloys, composites and plastics. They are specially designed to minimize heat buildup on the work surface.
- Fine finishes on precision tooled pieces.
- Aerospace, automotive, electronics and medical instrument manufacturers.
- Cool Running—Operators can apply more pressure to these wheels because they are less sensitive to heat buildup at the work surface.
- Safe & Clean—Synthetic fiber and resin construction eliminate danger of loose flying wires commonly associated with wire wheels. And, they are cleaner to use than buffs and compounds.
- Choose from a wide range of densities and grades for use on a variety of jobs from deburring precision threads to polishing welds.

Clean and Strip Cup Wheels

Cup Wheels will fit a wide range of right angle grinders (3" and 4" diameter sizes have the convenient spin-on feature) with a broad selection of thread sizes.

Applications: Aggressive, long lasting, cleaning and coating removal and other tough MRO uses.

Accessories: Use 6" diameter cup wheel with the 3M Cup Wheel Back-up Pad No. 955. The lower of the wheel or holder MOS rating must always be used.

Multi-Finishing Wheels

The wheel for producing uniform grain finishes on stainless steel and other metals

Multi-Finishing wheels are highly conformable, soft wheels that create uniform and attractive final finishes on ferrous and non-ferrous metals. They are tough enough to finish edges and welds and soft enough to final finish large, flat surfaces.

Cut & Polish Wheels

Heavy duty wheels for aggressive blending and finishing

Long-lasting and aggressive, Cut & Polish wheels perform well on all kinds of tough blending and finishing jobs. They produce uniform results quickly and easily and are often used to replace conventional abrasives such as rubber bonded wheels, set-up wheels, abrasive flap wheels and belts.

PG™ Wheels

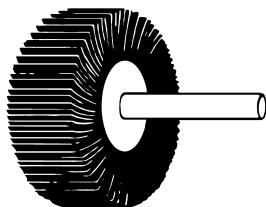

3M™ PG wheels deliver a consistent finish and a uniform rate of cut. They are non-loading, non-glazing and non-dulling. As they are used the flaps wear away to continually expose new abrasive. PG wheels can be shaped to fit any desired contour, even a compound radius. There is a full line of accessories that complements the PG wheel line to give you the best possible finish in the least time.

3M™ 747D Regalite™ Polycut™ Resin Bond Cloth X Wt.

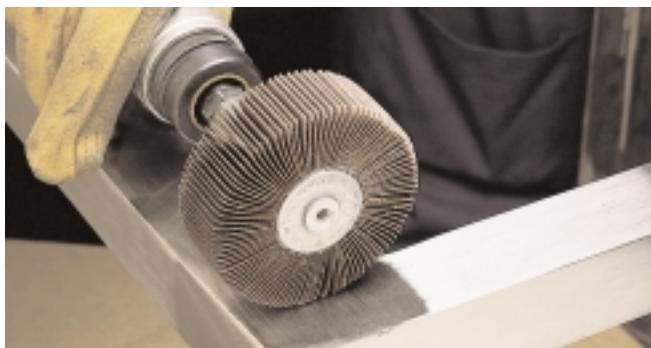

Premium aluminum oxide mineral and Cubitron ceramic aluminum oxide coated on a cloth backing. Incorporates a grinding aid (excellent for stainless).

Bench Area Products

When portable power tools are used in bench area operations, 3M helps keep things moving with a full line of money-saving, quality boosting coated abrasives and surface conditioning products. Each is designed to deliver outstanding results and to speed up time-consuming jobs such as grinding, deburring, blending, cleaning, and finishing of flat and irregular surfaces and hard-to-reach areas.

119

Scotch-Brite high performance flap brushes (CFFB) provide consistent finishes. Shown here with the 3M Roloc + holding system.

112

Scotch-Brite spindle mounted ganged discs provide a high degree of conformability.

113

Scotch-Brite stars mount singly or in combination for efficient I.D. cleaning and polishing operations.

A complete grinding and surface conditioning system

Used individually or as part of a complete grinding and surface conditioning sequence, each 3M product maximizes results in your bench area operations. Often, the combination of 3M coated abrasives and Scotch-Brite surface conditioning products can eliminate the need for intermediate grinding or blending steps.

CSD1-R, CSD1-S, CSD2-R, CSD2-S

Either one Clean and Strip Disc (CSD1) or two Clean and Strip Discs (CSD2) mounted to a shaft. These products are excellent for heavy duty cleaning of rusts, oxides, paints, and coatings. Cleans much faster and safer than wire brushes.

Stars

Scotch-Brite Stars are the perfect choice for cleaning and polishing I.D. of pipe and tubing. Their unique shape allows the star tips to provide constant outward pressure on the walls of parts made of steel, aluminum or plastic so you can quickly get a smooth, consistent cleaning action.

Scotch-Brite Stars are available in a variety of sizes and grades and are designed to work with the 3M™ Brand Mandrel No. 944. They can be used with power bench tools such as die grinders, straight-shaft grinders, or electric drills.

Evenrun Bands

Evenrun bands are constructed of sharp, well-bonded mineral, coated on a strong drills cloth backing and spirally wound over a cloth inner liner. This forms an abrasive-surfaced cylinder that can rotate smoothly in either direction. This easy-to-use product provides a fast, continuous cut and long-life performance so as to get lower costs per work piece.

3M™ 747D Regalite™ Polycut™ RB Cloth X Wt.

A premium constructed Evenrun Band utilizing 3M's Cubitron & aluminum oxide minerals. An outstanding value for use on a variety of exotic and other metals.

3M™ Square Pads

3M Square Pads are ideal for fast grind-blending on channels, fillets, corners or spotting on flat surfaces. As the pad rotates, the corners exert a fast, biting action and gradually wear-down, constantly exposing fresh abrasive.

Miscellaneous – Coated Abrasive Products

3M™ 415U/415N Stikit™ Tri-M-ite™ Silicon Carbide Refill Rolls

Stikit refill rolls are one long continuous strip of abrasive with the adhesive already applied. Operators use ALL the abrasive taken from the roll...with conventional methods, a great deal of the abrasive is wasted since it must be wrapped around a block and is not used for sanding. Stikit abrasives, used in conjunction with a sanding block, also eliminate many of the problems associated with hand sanding, such as splinters and finger marks on the wood surface from uneven sanding pressure. And Stikit refill rolls, unlike loose abrasives, do not end up on the floor of the plant where they're apt to be swept up at the end of the day, causing unnecessary waste.

3M™ Flexible Diamond Products

Achieve better finishes—without sacrificing cut rates on hard-to-grind materials with 3M Flexible Diamond Products. A metal plated bond or tough resin bond securely anchors micron graded diamonds to our premium, flexible backing material to offer durability and longer life, while allowing conformance to a variety of contours. The open dot pattern produces aggressive cutting action and reduces loading.

3M™ 6002J QRS Discs

Aggressive, clean-cutting and long lasting. Ideal for finishing, touch-ups or repair of hard to grind materials: ceramics, composites, glass, carbide, stone, marble and fiberglass. Excellent for polishing dies and molds.

Hook-and-Loop backing makes changing discs easy, just pull off the disc in use and press on another. Intended for use with 3M Hookit Roloc Disc Pad, Type J.

3M™ Diamond Files

- Diamond files are highly versatile — great for many uses: grind hard-to-cut materials, fine-finish delicate surfaces, bevel edges, remove burrs, sharpen tools.
- Use wet or dry. For better results, use with water or an oil lubricant.
- Available in sets of 4 file sizes and a choice of 3 grades, from 125 micron to 20 micron.
- The different micron grades are conveniently color coded.

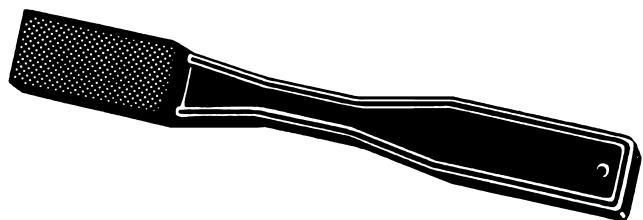

Packaging:

SETS: consist of 4 files, one of each size. All files in a set are the same grade.

FILES: Minimum package = 10 files per box. 5 boxes/unit.
Files may not be assorted within a box.
